Client

Firma Leela Quantum Tech, LLC
Attn: Eleonora Goldenberg
1421 LUISA STREET, STE G
SANTA FEE, NM 87505
USA

Project participants:

Project leader: Wolfgang Hans Albrecht, president and scientific director of the IFVBESA

Test person: Eva Krankl, Vice President and deputy scientific director of the IFVBESA

Respondent: 8 anonymous subjects in the (Detail) Projects P72 1.0, P72 2.0, P72 3.0, P72 4.0 as well P72 4.1 and P72 4.2
These break down as follows:

- 1 Respondent at P72 1.0 - New-Snow (chemtrails)
- 2 Respondent at P72 2.0 - Automatic-clocks in the Quantum bloc
- 1 Respondent at P72 3.0 – Sweater at quantum entanglement via quantum-bloc
- 5 Respondents at P72 4.0 - family home + quantum-bloc
- 3 Respondents at P72 4.1 - family home without quantum-bloc
- 3 Respondents at P72 4.2 - family home + quantum-bloc with quantum entanglement

other participants: none

Project location:

Location of the IFVBESA, Hauptstraße 1, A 4861 Kammer/Schörfling

Date: 27.12.2020 until 07.02.2020

Project duration: 42 Days

Important notes:

The client owns the right to exploit this project report. Irrespective of this, this report represents intellectual property of IFVBESA as the contractor. The contractor is entitled to use this project report for other purposes if this does not violate the client's data protection or confidentiality. On the other hand, the project report, with the exception of the "authorized abridged version", may not be changed or passed on in abridged form without the consent of the IFVBESA. The order for this project refers to bioenergetically measurable values and their interpretation according to the guidelines of BESA or the IFVBESA. The maintenance of the quality of the tested products as well as their regular control is the task and responsibility of the client. Investigation of the manufacture, mechanism of action or interpretations of the Client's products to third parties is not the responsibility or task of the Contractor. Video recordings may be made only with the permission of IFVBESA.

Basics of the Research Project Creation P72

The international professional association for bioenergetic system analysis (IFVBESA) was commissioned by the company Leela Quantum Tech LLC to test or prove the effect of the test object "Leela Quantum Bloc" by means of bioenergetic system analysis (BESA). The testing took place independently of the subjective feeling of all test persons.

Description of the "Leela Quantum Bloc" by the client:

"Leela Quantum Bloc" is a quantum space generator and concentrator, which has highly concentrated quantum energy inside the device between the plates. At the same time, the Quantum Bloc has an energetic extension of more than 100 meters, which however does not represent the concentrated quantum space, but a positive energetic quantum field. This quantum field neutralizes and harmonizes negative frequencies and vibrations. Also, it provides overall positive, inviting and peaceful energy. In the quantum space itself (between the plates), each object that is placed inside is energetically restructured, optimized and charged with quantum energy within 60 seconds. It can be said from previous tests that any object that has been in the "Leela Quantum Bloc" becomes "better". Whether that is water, food, jewelry, technical devices, etc. The essential difference of the "Quantum Bloc" to other "quantum energy producing devices" is that the Quantum Bloc works on more than one level of consciousness (and thus on this level one-dimensional, figuratively represented like a flat field). The Quantum Bloc works on more than 50 levels at the same time and is therefore a multidimensional quantum space in every respect. This has the advantage, compared to other devices, that even if the energy is increased, there is no imbalance or negative energetic pressure. This is especially important for users whose organism cannot yet handle such higher energy levels. Furthermore, the "Leela Quantum Bloc" needs only about 30 seconds to transfer a frequency in it from one object to another. We have also been able to observe this in 20 seconds, but officially advise a minute (60 seconds).

The client assumes that the Quantum Bloc can produce the following effects:

- charge any object with comprehensive, positive quantum energy.
- For clarification: energies are always neutral. With "positive" the client refers to the positively affecting energy of the objects in the room such as people, animals, plants, etc.
- copy any frequencies within only 1 minute
- harmonizing energy field for home, workplace, car, etc.
- harmonization of any negative frequencies
- helps to dive deeper into one's own consciousness (whether in meditation, daily life, "retrieving" information, etc.)
- optimizes food, water, and all other substances

- positive effect on human cells and body (physical and energetic). For this purpose, it is enough to be in the outer field of the Quantum Block. If one part of the body is in the concentrated quantum space, the positive effects are not only applied to the cells of this one body part, but the cells of the whole body are intensively charged.
- neutralizes unwanted "dark entities" or keeps them away due to the high light vibration or "brings" them into the light
- cleanses the aura
- supports positive affirmations within the framework of legality and accelerates their manifestation within the framework of legality

Research Funding Services of the IFVBESA - BESA Reference Tests

General information about this project:

The **detailed project P72 1.0** was concerned with the proof of effect of the "Leela Quantum Bloc" against heavy metals, which were tested in the run-up to the BESA effect measurements by means of the bioenergetic system analysis in the snow. For this project 1 test person was selected.

The **detailed project P72 2.0** dealt with the proof of effect of the "Leela Quantum Bloc" on wrist watches. For this project, 2 subjects were selected.

Wrist watches, especially battery-operated quartz wrist watches, permanently generate micro current surges to drive the watch hands. Normally, these watches are only worn during the day, but just as many people wear these watches day and night. Due to the permanent use, these electric surges affect the bioenergetic system of people. Apart from this, the battery generates a permanently acting electromagnetic field at the bioenergetically sensitive points (heart meridian) of the wrists.

The effect of the "Leela Quantum Bloc" on an automatic watch, without battery operation, was tested on test person 1. It was additionally questioned on the test person whether the stressful effects of heavy metals such as mercury, aluminum, lead and arsenic in correlation with EMSF (electromagnetic interference fields) can be neutralized by the effect of the "Leela Quantum Block". The EMSFs tested included: WLAN, Smartmeter, a connected cell phone via 4G and 5G cellular.

Subject 2 was used to test the effect of the "Leela Quantum Bloc" on a quartz wristwatch running on battery power. In this project, the question was whether the effect of the "Leela Quantum Bloc" can neutralize the possibly occurring interference fields of the watch.

In this **detailed project P72 3.0**, the aim was to perform quantum physical activation of objects, such as a ladies' sweater made of 100% cotton over a distance of about 40

kilometers in the "Leela Quantum Bloc" and to question its effectiveness with BESA tests. For this purpose, the possibility of so-called quantum entanglement was applied. For this

process, a coded photograph previously taken of the sweater was placed in the "Leela Quantum Block" for 24 hours. The photograph was simply coded or tagged with the date of activation. Through the morphogenetic field (quantum field), the photograph of the sweater is connected to the physical original. For this project, 1 subject was selected.

This **detailed project P72 4.0** was about the proof of effect of the "Leela Quantum Bloc" against certain stress factors in the environment of a 2-family house including inhabitants and pets. For this project, 1 house and 4 test persons were selected, i.e. a total of 5 test persons. Subjects 1 and 2 were the couple living in the house, subject 3 was the cat Mia, subject 4 was the rabbit, Paul. Subject 5 was the house itself. For subjects 3, 4 and 5 a so-called surrogate served.

What is a surrogate: This is a substitute person who stands for the respective subjects. Example: A cat has fingers and toes in a different sense than a human. Otherwise, the cat has all organs like the human. In this case the surrogate takes over the function of the cat during the BESA test.

For this detail project (as belonging to project P72 4.0) 2 subprojects were carried out.

In this **detailed project P72 4.1**, the aim was to show what happens when the "Leela Quantum Bloc" is removed from the house again. The BESA tests were performed 2 days after removal of the "Leela Quantum Bloc". In project P72 4.0, the 7-day effect of the "Leela Quantum Bloc" on the house and its occupants was presented.

For this project P72 4.1, 3 subjects were selected from the preliminary project P72 4.0, and BESA testing was performed on subject 1 (female house resident) and subject 4 (rabbit Paul), as well as on the house itself. In addition, the effect of EMSF (electromagnetic fields) was again investigated on the two subjects. In this project, these included: W-Lan, Bluetooth, Smart Meter as well as the radiation from mobile phones of the 4G and 5G generation. For subjects 4 and 5, a so-called surrogate was used, as in project P72 4.0.

In this **detailed project P72 4.2**, the aim was to perform quantum physical activation of a building and its co-inhabitants over a distance of about 30 kilometers in the "Leela Quantum Bloc" and to question its effectiveness via BESA tests. For this purpose, the possibility of so-called quantum entanglement was applied. For this process, a photograph of the respective subject, taken immediately beforehand by the subject, was placed in the "Leela Quantum Bloc" for 24 hours. The photograph was simply marked with the date of activation. Via the morphogenetic field (quantum field) the photograph of the respective test person is connected with the physical original. For this project 3 test persons were selected, who were already available in the project P72 4.0. Via the so-called quantum entanglement, the proof of effect of the "Leela Quantum Bloc" against certain stress factors in the environment of a 2-family house including 2 of its inhabitants should be proven. For this project, the house as well as 2 further test persons, thus together 3 test persons were selected. For the test persons 2 and 3 again surrogates were used.

The toxic or pathogenic information from this project was presented digitally via PC.

The "Leela Quantum Bloc" was tested according to the requirements of the client within the framework of the applicable conditions of the IFVBESA for the award of quality seals. Depending on the significance of the test results, seals of approval are awarded in 3 categories, taking into account all tests of a project.

For the "Leela Quantum Bloc", it should be determined whether, through its application, stresses from pathogenic stress factors and EMSF or, as a consequence, existing disturbances, problems, blockages, disharmonies in the energy system of the test persons (biological system) can be harmonized, neutralized and thus negative pathological states can be replaced by positive states. It should be checked whether the test object can neutralize the negative perception of the perceived disturbance effects of the test persons on their organism. This was questioned in the following commissioned tests of this project.

To the general information of the information transfer:

The information transfer takes place from the hyperspace of the test object to the hyperspace of biological objects (humans, animals, plants). Next, the information reaches the reference space or the energy space via so-called interaction channels. This is a union of, among other things, all organs and energy forms in the biological object. There, the information of the program can dynamically materialize and thus change current states. The changes can appear in the form of neutralization or harmonization of disturbances, dissolution of problems, blockages, and disharmonies.

Research Project Description

The reason for the tests was to prove the functionality of the "Leela Quantum Bloc" by test results obtained by confronting subjects with exactly selected pathogenic stress factors and EMSF-carrying objects in order to significantly prove and compare their reactions without the "Leela Quantum Bloc" and with the "Leela Quantum Bloc". Subjects were contacted, i.e., associated, with precisely predetermined stress factors and objects in BEFORE measurements and an AFTER measurement.

- The BEFORE measurements were made without the "Leela Quantum Bloc".
- The AFTER measurements were made after activation of the test objects by the "Leela Quantum Bloc"

The question for each AFTER measurement was: "Is the "Leela Quantum Bloc" suitable and able to harmonize or neutralize the negative effects of said toxic information on the organism as perceived?"

The concern of the development team was to determine whether the test object, as noted in the product description, is capable of neutralizing the disturbances in the meridian system of biological objects (subjects) resulting from toxic information.

Conditions:

BESA tests were carried out in the premises of IFVBESA under laboratory conditions, at room temperature 20°Celsius, on natural wood floor. The test persons were made testable before the BESA tests or the test possibilities were questioned with the respective test person. All BESA field tests were performed according to the IFVBESA conditions for field tests.

- Pos.1** BESA 1 Test Basic (bioenergetic status) on the test persons
- Pos.2** BESA 2 Testing on confrontation with the respective toxic information on the test persons
- Pos.3** BESA 3 Testing in case of confrontation with the respective toxic information after application of the "Leela Quantum Bloc" on all test subjects
- Pos.4** BESA 4 Test with confrontation with the certain toxic information without application of the "Leela Quantum Bloc" at the respective test subjects
- Pos.5** Evaluation of the results in the detailed project as well as summary in an appropriate expert's report according to sample

Specifications during implementation

1. **BESA-baseline measurement** of the test persons at all previously determined measurement points (TING points) serve to determine the actual condition. The results were precisely determined according to the BESA specifications and documented via the BESA graphs.

2. The **test persons** were brought into contact **with the toxic information** depending on the project, whereby the sequence discussed with the client was considered as the specification and was adhered to accordingly. In order to determine the current energy state, the measuring points mentioned in point 1 were measured in the same order and for the same duration during each test of toxic information. The results were precisely determined according to the BESA specifications and documented via the BESA graphs.

3. Activation of the test object

3.1 The respective test objects were **activated in the "Leela Quantum Bloc"** and the BESA tests were performed according to the client's specifications.

3.2 The test subjects were brought into contact with the toxic information. The measurement points mentioned in point 1 were measured in the same order and time duration to determine the current energy state. The results were precisely determined according to the BESA specifications and documented via the BESA graphs.

3.3 To **activate the test subjects**, they were placed in the "Leela Quantum Bloc" as a photograph for 24 hours (quantum entanglement). This was in accordance with the specifications of the client. The measurement points mentioned in point 1 were measured

in the same order and time duration to determine the current energy state. As before, the results were precisely determined according to the BESA specifications and documented via the BESA graphs.

3. General Information about BESA testing

3.1 Effects of the magnetic field

The human being represents a kind of receiving antenna for environmental information. This is because human life depends fundamentally and exclusively on environmental information. Our organism is biologically very sensitive where natural information (fields) is located or where this natural information is subject to interactions and fluctuations. For this reason, detected informative interference fields are biologically highly relevant. **Any reduction or transformation of these disturbances (ideally to 100 percent) is biologically very important, often even vital. These informational disturbances from our environment are only compatible with life if they can be readjusted to a natural fluctuation tolerance.** Disturbances, problems, blockages, disharmonies in the biological control circuit of the human being find their causes in such disturbing information influences. Therefore, bioenergetic examinations in the meridian system of the human being work great for questioning the coherent effectiveness of, for example, products in relation to various disturbing fields and information.

3.2 Systemic requirements

The tests are carried out according to the specifications of the international professional association for BESA or the manual for BESA. BESA is used from a systemic, etiological and bioenergetic regulatory point of view. Systemic means that each tested parameter also represents several subordinate or superordinate levels and dimensions. Testing on a meridian, such as the lung meridian, primarily provides information about the energetic regulatory behavior within this meridian. In a subordinate sense, the readings of this meridian can give information about the organic, muscular and the emotional levels. In a superordinate sense, the readings of the lung meridian can give information about dimensions such as the astral plane (4th dimension) and various levels of consciousness (from the 5th dimension). Subsequently, the behavior in the structural, energetic, spiritual, craniosacral structure or dimension is also revealed. The bioenergetic measurements are made by stimulating the energetic potential within the meridians. Measurement voltages average 900 to 1400 mV (millivolts) with a measurement current between 5.5 and 11.25 μA (microamps). The apparent ohmic resistance varies during the measurement process between 0 and 600 k Ω (kiloohm) depending on the instantaneous, energetic state of the person being measured).

3.3 Technical device performance

Appropriate technical instrument performance ensures that not only skin resistance is measured during the measurement process, but also the interaction of various factors essential for the regulation of a system. From a physiological point of view, these include ionic current changes in the subcutaneous tissue, electrical potential against the measuring current, instantaneous polarization behavior of the tissue and electrolyte shifts. In addition to the electrophysical tissue properties around the measuring point, the measurement should, above all, provide information about the regulatory capacity of the control circuit belonging to the measuring point.

Measuring device used: BESA Easy Quick-Check

SN: E 02074N

Labor Silberbauer; 1030 Vienna - Austria, Battery: 2xNiMH size AA; 2,6V,

300mA max. Messtoleranzen:

Measurement tolerances: In principle, fluctuations in measured values can occur, since the machine is operated by people who could specifically have an energetic influence on the measurement results. It is currently the case that only special experts, who have been further trained by the BESA Academy, carry out such tests. The current BESA tests were personally led or performed by Mrs. Eva Krankl as vice president and deputy head of the scientific department of IFVBESA. Certain quality details already programmed in the BESA software provide additional information about when a measurement result deviates from the programmed standards or when a measurement error has occurred by the tester. Another quality feature of BESA testing is that, as a precautionary measure against bias, each specialist must undergo an external examination for the tests. Therefore, as the tests of technical (interference) fields show incriminating measurement results, occasional measurement errors of 10 percent could be ignored for such projects. However, experience shows that devices for harmonization of technical interference fields either work or they do not work. As a matter of principle, IFVBESA applies the very highest precision according to precisely defined standards in BESA tests. These BESA standards can only be met by professionals with 1000-fold diagnostic experience. Apart from this, electromagnetic (interference) fields acting from outside and possibly influencing the measurement results can be detected by equipment and corrected accordingly. In addition, there is a software-specific control instance against technical measurement errors.

3.4 Measurement procedure:

BESA measurements are taken at "electromagnetically significant" points on the skin. These are partly classical acupuncture points as well as a few energetically relevant and system-coupled skin areas. By electrophysical measurements at precise anatomically localized skin areas (acupuncture points) the recording of the following measurement data is carried out:

- the current energetic state in the acupuncture point of the respective meridian
- the energetic regulation dynamics in the acupuncture point or at the meridian and its subordinate and superordinate systems and subsystems. This concerns the organ area (subordinate level) as well as the superordinate levels and dimensions of the morphic field on the human organism.

For simplified reading, the scale of BESA is divided into 100 graduation marks, where the scale reading "0 graduation marks" corresponds to a relatively high resistance of over 600 kilohms and the scale reading "100 graduation marks" corresponds to a low resistance of 0 ohms. The scale reading "50 graduation marks" represents 95 kilohms. The experience of repeated measurements on healthy people, carried out in decades, has shown that the value "50 scale divisions (sct.)" is a physiologically neutral (healthy) reference point. It is "the" outstanding and aspiring measurement value and is also called "technical ZERO value" or ZERO point".

About the acupuncture point: The anatomical structure of an acupuncture point is formed by a bundle of nerve vessels wrapped in loose connective tissue. Directly at the acupuncture point it pierces the superficial body fascia (Facia corporis superficialis = FCS). Exactly at this point, the electrical resistance is also lower. Where no FCS is developed (e.g. in the face, in parts of the head or at the end of the extremities), such a bundle of nerve vessels can also be detected in the acupuncture point. This also applies to the special conditions along the DuMai meridian (governor or steering vessel at the front of the body) and the RenMai meridian (conception vessel at the back of the body). There, in the point area, the nerve vessel bundles of both sides of the body are interconnected.

3.5 Experimental performance and interpretation

The obtained measurement signals at the acupuncture points of the meridians are an expression of the energetic events and the energetic regulation ability of the obtained environmental signals. The presented BESA standard graphics (see the detailed project descriptions) show the respective energetic regulation behavior within the indicated meridians. The meridians belonging together in each case are represented in so-called form circles or elements. A distinction is always made between the right and the left side. In order to obtain the most differentiated illustration possible, degenerative measured values (energy deficiency) are shown in blue and overheated or inflammatory measured values (energy surplus) in yellow. Optimal measured values are displayed in green (50 to 70 sct.), whereby the measured value 50 sct. is to be aimed at, because only it represents a balanced regulatory behavior. Measured values that show up in red indicate a deeper deregulation that currently cannot be regulated by the organism. The effect of the tested object on the field or the differences of the regulatory behavior in the organism are mapped or documented by differentiated measurements on the respective BESA measurement data sheets marked for this purpose. (see detailed project descriptions in the detailed projects).

Interpretation of BESA measurement results

The measured value of 50 on the tested meridian represents an optimal energetic state in this organ or its higher levels. Measured values in the range of 50 to max. 70 still count as a neutral and balanced energy status. The organism is able to regulate irritations of the system (wrong environmental signals) very well.

Measured values above 70 to 100 represent the inflammatory range or a so-called energy surplus as a reaction to the irritations of the system by corresponding environmental signals. After reaching the maximum values, the energy state tips into the degenerative (blue) range.

Measured values from below 50 to around 0 represent the so-called degenerative measuring range or a lack of energy as a reaction to the stimulation of the system by corresponding environmental signals.

Measured values represented by a so-called pointer drop of more than 3 scale lines indicate total deregulation. The influence of certain environmental signals then leads to such strong system overloads, which can only be harmonized by corresponding new signals.

4. Expert Opinion

The measurement results presented in the project description P72 have shown that after application of the test object **all previously incriminating toxic information and energetic deregulations could be zeroed and bioenergetically harmonized** within the specified time frame. The graphical evaluations of the BESA tests document the results in a **qualitatively comprehensible** way by means of the color-coded measured values. The measured values highlighted in green in the graphic evaluations show as **quantitative effects** a consistently balanced **bioenergetic regulation** in the meridians and thus in all subordinate and superordinate levels and dimensions.

The expert opinion thus confirms the quantitative results in that they: **1. are metrologically significant** (meaningful) and **2. are biologically relevant** (important or significant).

4.1 Measurement significance of the BESA tests

4.1.1 Significance criteria:

The **effects determined in the BESA tests** as a result of the bioenergetic resonance behavior, show both in the area of status determination (effect from the area of existing interference fields by various toxic substances or environmental information and the resulting bioenergetic interference fields or subsequently arising body-immanent deregulations) and after application of the test object changes that are clearly at (neither

above nor below the specified measurement tolerances) in the targeted measurement range. Thus, they are clearly to be classified as **significant**. According to the criteria of the IFVBESA, all those measurement results are considered significant that allow regulation into the green range.

According to the criteria of the IFVBESA, the BESA measurement values are to be regarded as confirmed. The fact that the criteria for the determined results are fulfilled could be proven via the BESA tests in the detailed projects.

4.1.2 Statistical data analysis

Each measurement series may have measurement points where effects remain below the significance threshold (transition regions). A statistical analysis has the advantage of presenting an overall view of the significance of the effects. It is precisely these effects that are obtained in the case of seals of approval with 4 or 5 stars. The more extensive the data analysis, the more accurate the statistical analysis.

In the BESA tables and BESA graphs, the statistical characteristic data of currently 1,640 measured values and results were mapped. As can be seen from the statistical data and BESA graphs, the measured values improved significantly between BESA BEFORE measurements and BESA AFTER measurements. The effects due to the test object were confirmed by the BESA measurements on the 8 subjects.

4.2 Biological relevance (importance) of the measurement results and effects

In case of continuous exposure of humans to toxic information or toxic stress factors, the exposure becomes all the more severe. This is shown by the currently performed BESA tests on the test persons.

In any case, these and similar stress factors represent a serious risk for human salutogenesis.

The test object of the client, which was bioenergetically tested in this project, was able to optimally neutralize the bioenergetically stressful effects and impacts.

The decisive ability of the test object to harmonize the toxic stress factors (information) tested in the project P72 or their transformation into biological information of life-promoting quality is proven by this expert opinion.

5. Authorized Summary:

The BESA tests conducted by IFVBESA on the energetic and physical effectiveness of the "Leela Quantum Bloc" have clearly shown that it is capable of neutralizing or harmonizing biologically significant stress factors on the subject's energetic system. By means of the bioenergetic system analysis, the effect of the above-mentioned stress factors on the test persons, their meridian systems and their energetic-biological control circuits was

questioned and systemically tested on the bioenergetic level. The BESA tests BEFORE - AFTER show significant changes at the tested acupuncture points or at the meridian system. The measurement data as well as their key figures confirm the stress caused by the tested interference fields on the organism of the test persons. The data also impressively shows that after application of the "Leela Quantum Bloc", the deregulating energies are transformed into body-immanent and biocompatible energies. All measured values improved significantly from the mostly 100-percent blue measuring range to the green mostly 50-second range (scale value), i.e. the range of optimal measured values. This means: an optimal regulation dynamic has taken place. Here, in the sense of the IFVBESA, one can clearly speak of an optimal, significant improvement of the body's own energy situation.

Result: The test persons were brought into contact with heavily stressing frequencies (information) during the BESA-AFTER tests. In contrast to the BEFORE tests, in which the "Leela Quantum Bloc" was not used, positive measurement results were found throughout, indicating that neutralization or harmonization had taken place. The regulatory dynamics developed into an optimal effective range. From a holistic point of view, it can be assumed that the positive effect on the test persons also occurs in other people.

By demonstrating the bioenergetic effectiveness of the "Leela Quantum Bloc" in this P72 project, the requirements for obtaining a BESA seal of approval from the International Professional Association for BESA were met.
